- Number memory - Orientation memory - Speed - Delayed memory - Listening - Comprehension - Working memory - Motor speed - Motor coordination - Overall assessment Number memory - The application requires the user to input numbers into a text box. It is possible to input numbers from 1-10 to the box or input numbers more than 10 in 2's. Once numbers are entered the app will process them. - Once processed the app will output the number of numbers entered and how many numbers the user entered. - It is also possible to type in an amount of numbers and see how many numbers are entered. Orientation memory - This task requires the user to look at a picture for 3 seconds. When they're done viewing the picture they're shown a series of words. - The user must attempt to spell the words the same way that they were shown. Each word is spelled with numbers from 1-9. - When the user is done spelling the application will tell them how many of the words they were able to spell correctly or how many of the words they were unable to spell correctly. Speed - This task allows the user to input numbers from 1-10 in order to try to beat a selected time. - Once the time is beat the user will be notified. - It is also possible to type in an amount of numbers and input them into the box to try to beat the time. Delayed memory - This memory task gives the user the option to input

numbers into the box and submit them. It is possible to enter numbers in this application's order (1,2,3,4...) or mixed order (1,3,2,4...) - Once the numbers are entered into the box they will be processed and the user will be able to look at their numbers at any point by using the "Back" button. - Once the numbers have been processed the user will be able to see if any of the numbers changed. If they didn't change then the user will be notified that the numbers have not changed. Listening - The application is set up in the same way as the orientation memory task. The user views a picture for 3 seconds. Once they're done viewing the picture they will be shown a series of words and will have to read them into the app's textbox. - Once the user is done reading the words they will 6a5afdab4c

## Cognitionplay X64

### What's New In?

Cognitionplay is an application designed to help people with cognitive disabilities understand different things. Take a look, try and score. (it's FREE) Psy-Crew is a tool for assessing and monitoring the state of an individual's mental and physical health. It is designed to keep track of an individual's weight, his/her blood pressure, pulse, respiratory rate and responses to environmental changes (temperature, light, sound and humidity), as well as the individual's responses to a range of psycho-stimuli. The Psy-Crew is intended to measure changes in a patient's health over time and keep them under the watch of a family member, or other person trusted by a patient. Psy-Crew Description: The Psy-Crew is a tool developed to assist with measuring and tracking changes in a user's health. Designed to be both simple to use and intuitive, the Psy-Crew is aimed at individuals who have poor or no access to health care, as well as healthcare professionals, clinicians, as well as social workers and health educators. In addition, it is intended to assist with reducing the consequences of trauma, for example, Post-Traumatic Stress Disorder (PTSD). The Psy-Crew is intended to assist in measuring a user's responses to stimuli, be they internal or external, and be able to record a time-stamped response to any of the stimuli. The Psy-Crew is intended to record the responses to a wide range of stimuli, not just psycho-stimuli, and to assist with identifying trends and patterns of an individual's responses to stimuli, which can provide valuable information that can assist with assisting with a variety of issues. For example, a user's sleep patterns over time may indicate a potential sleep disorder (e.g., narcolepsy), or a dramatic increase in a user's response to a stimulus (e.g., a high blood pressure) may indicate a need to monitor an individual's health. The Psy-Crew is designed to assist with reporting a response to a particular stimulus to a person responsible for helping a user, such as a family member, a friend, a health professional or a carer. The Psy-Crew should be taken as a complement to both primary and secondary care, as well as other resources which assist with monitoring an individual's health. The Psy-Crew also has the ability to support early intervention, and to assist with reducing the consequences of trauma, for example, Post-Traumatic Stress Disorder (PTSD). Psy
